

Info about MiscEl

The program contains a lot of pages with different electronic calculations. Each page contain one or more different calculations. The program is free to download and use, but the program is timelocked. A new version will have to be downloaded after about 1/2 year
For download: See bottom of page
For good ideas and bug reports please [write a message to author](#)

Last updates:

- Page [Capacitor design](#) added to MiscEl
- Page [Periodic table](#) added to MiscEl
- [Integer math](#), added: Real to Mult/Div with $x/2^{\text{wordsize}}$
- Improved precision and range on atmosphere values in [weather and air](#)
- I have moved to Delphi2007 and Windows Vista (MiscEl will also work on Win2000 and WinXP)
- Updated [Two port](#) with T and PI circuits and added a help page for it
- Added a summary of all circuits in MiscEl: [Circuits](#)
- Improved save formats in [Curve fit](#)
- Added more help pages and cross linking between pages
- Added a [CRC calculations](#) page to this site
- Added a [MPU support](#) page to this site
- Added a [Hints and tricks](#) page to this site
- Added Air coil, analyze and design of air core inductors

Information

- [Circuits](#) A summary of all circuits in MiscEl and what calculations are supported for the circuit
- [MPU support](#) Where can MiscEl help when working with microprocessors
- [CRC calculations](#) With code to do CRC calculations
- [Hints and tricks](#) Some hints and tricks for using MiscEl

Functions

See [tricks](#) page for some hints on how to use MiscEl

- System

[Preferred components](#) Select component values used in all designs and step size for ctrl-n and ctrl-m

[Hotkeys](#) Define hotkeys for opening pages

- Miscellaneous

[Geometry](#) Handles: Circles, part of circles, triangles, squares, rectangles, trapezoid

[Sound](#) Sound speed and perceived sound levels

[Weather and air](#) %RH, dewpoint, air pressure and other weater releated calculations

[Periodic table](#) A periodic table with all elements, it has search functions and a few data for each element

[Photo lens](#) Some lens calculations

[Photo light](#) Some light calculations

- Calculations

[Calculator](#) Can do all the usual stuff, including mathematic.

[TinyCalc](#) Can do the same as the entry line in **Calculator**, but is very small when pulled out.

[Curve fit](#) Fits a curve to a collection of data points

[Ohms law](#) Ohms law, impendace of capacitor and inductors, complex power

[Ohms law 3 phase](#) Ohms law with complex power for 3 phase systems

[dB](#) Decibel and neper, both power and voltage including volt/watt for a reference level

[Charge curve](#) Capacitor/inductor charge/discharge with resistive, current and power loads (not all combinations supported)

[Waveforms](#) Calculates RMS, mean, PEEK, DC, FFT for different waveforms.

- Mechanical

[Wires](#) Calculates resistance and power loss in wires, can also do conversion between USA and european units.

[Cable calculations](#) Calculate frequence response of a cable

[Fan cooling](#) Calculates how big a fan to get rid of some power.

[Heatsink](#) Calculates junction temperature for specifed power level and heatsink

Printed circuit board Calculate microstrip, stripline, track resistance and current

Cable calculations Simulate cables at low (audio) frequences

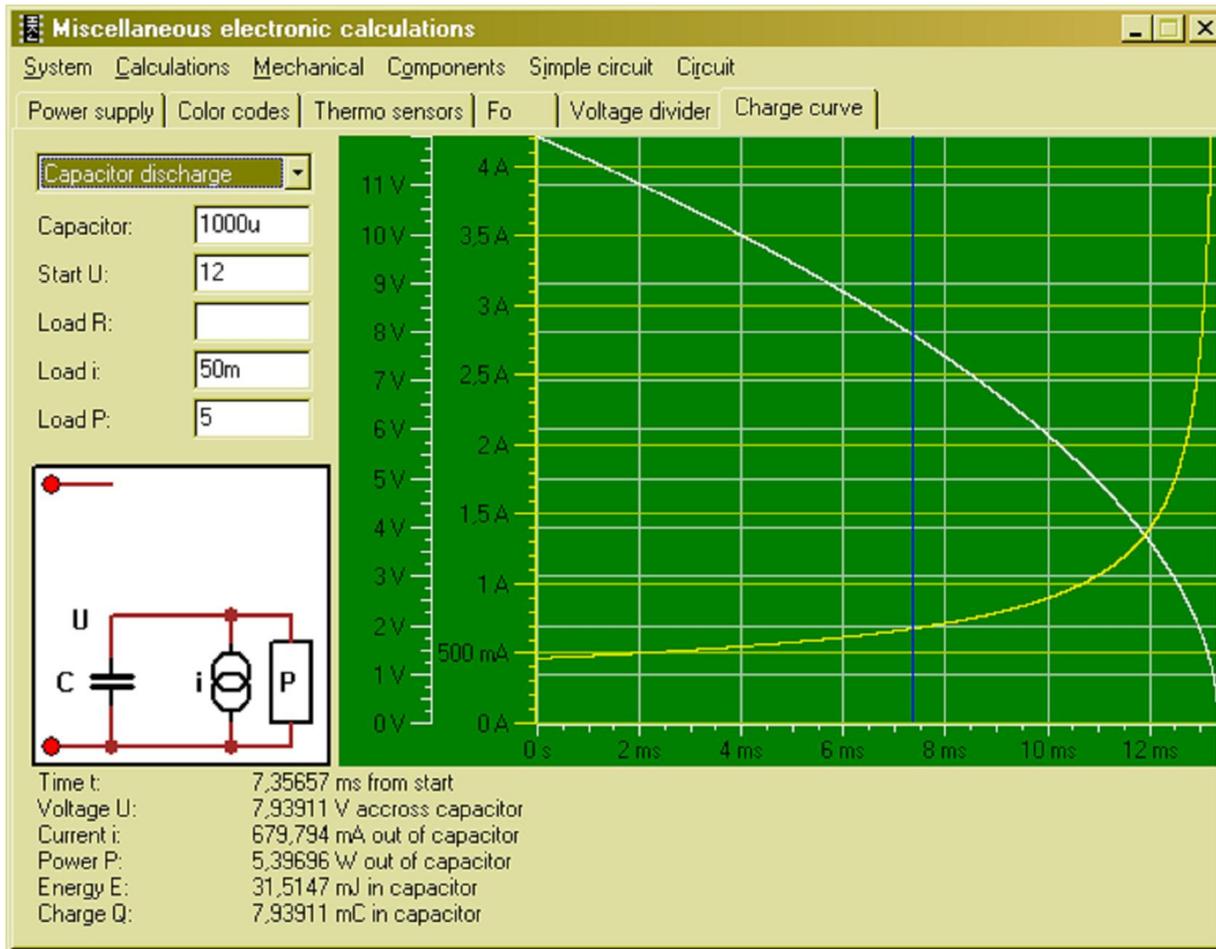

- Components

[Capacitor design](#) Calculate capacitance of different geometries

[Color codes](#) Convert between color codes and numeric values for many types of components.

- [Thermo sensors](#) Calculates for PT100, NTC and all types of thermocouples
- [Air coil](#) Analyze or design an air core inductor
- [Leds](#) Color/wavelength of leds and design of circuits to drive leds from DC or AC.
- [Components type numbers](#) Tries to decode component codes
- [Power MOS](#) Turn on/off time and power loss estimation
- MPU
 - [MPU Timers](#) Calculates divide factors for up to five software timers
 - [Integer math](#) Converts real numbers to fractions, calculates primes and other integer stuff
 - [Serial communication](#) Timing and curves, usefull when programming software uart's and IR rx/tx.
 - [CRC and checksum](#) Calculate crc, checksum and modulus for datablocks, can also analyze a datablock for what checksum/crc was used
- Simple Circuit
 - [Fo](#) Calculates Fo for RC, RL, RLC circuits
 - [Series/parallel](#) Calculate/design series/parallel connection of resistors, capacitors and inductors
 - [Charge time](#) Charge/discharge time for simple circuits (including 555).
 - Voltage divider Design/analyze voltage dividers, can include component tolerance and load.
 - [Two port](#) Conversion between different types of two ports.
- Circuit
 - [1. order filters](#) Analyze and design 32 different filter configurations
 - [Attenuator network](#) Design different kind of attenuators
 - [Power Supply](#) Analyze and design power supplies with 78xx and LM317 style regulators

Some screen dumps from MiscEl

Miscellaneous electronic calculations

System | Calculations | Mechanical | Components | Simple circuit | Circuit

Power supply | Color codes | Thermo sensors | Fo | Voltage divider | Charge curve

Circuit type: (RL)C, parallel

C (E6): 470 nF
L (E6): 47 mH

Fo 1.066 KHz @ phase=0
 Q 10.4934
 Impedance at Fo 3.33333 Kohm

For specified frequency
 Impedance 129.334 ohm 89.717 °
 Serial circuit to give same impedance at frequency
 Resistance 638.632 mohm
 Capacitance 410.196 nF
 Parallel circuit to give same impedance at frequency
 Resistance 26.1923 Kohm
 Capacitance 410.186 nF

Components
 C impedance 112.876 ohm 90 °
 L impedance 885.929 ohm 90 °

Installing

The program will automatic install first time it is run, this can be disabled by putting "noinstall" on the command line.

A few notes about the program

- Right click to get a menu (Works on most pages).
- If no other unit is specified then input fields are for basic SI values (meter, ohms, volts, etc.)

- It is possible to use SI-prefix after numbers, i.e. "10k" is a legal value
Be carefull with "10m" and "10M" the first is 0.01, the second is 10000000
- All input fields can do calculations.
- Red fields means error in input.
- Pages can be dragged outside main program, making it possible to view more pages simultaneous.
- Use Ctrl-N and Ctrl-M to step values.
- Remember to use "System, Prefered components" to set standard values (and step sizes).

Command line options for MiscEl

- -last Do not restore open pages from last run
- "pagename" Open this page, spelling must be with correct case. This option can be used multiple times
- noinstall Do not try to install MiscEl, just run the program from the current location
- -key{keyname} execute the hotkey definition for specified key i.e. "-keyF10" will execute the definition for F10
